One-Tube Tissue DNA Extraction Kit

The kit is designed for rapid isolation of genomic DNA from animal tissue, mouse tail and ear clips, human hair or saliva, fish and insect tissues. There is no need for phenol extraction, overnight digestion, DNA precipitation or column purification; the lysate can be use directly as PCR template. The one tube procedure minimizes possibility of cross contaminations between samples. The whole procedure takes less than 15 minute and this kit is an example of speed and efficiency.

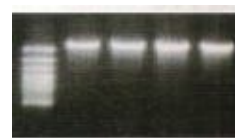

25mg frozen tissue sample in 0.8% Agarose Gel.

EZ-10 Spin Column Kits

The EZ-10 Spin Column Kits provide a simple and efficient method for purification of plasmid DNA, extraction of DNA from agarose gels, and purification of DNA from enzymatic reactions such as PCR or restriction enzyme digestions. The purification method used in these protocols does not require use of phenol, chloroform, or CsCl. The DNA is purified without an additional step of ethanol precipitation.

OUR GLOBAL MISSION

“ Combine the powerful new technology of genome-wide RNAi-based screening with international scientific exchange and the collaboration of leading research institutions in order to rapidly accelerate basic biological research and medical discovery. ”

The RNAi Global Initiative

The RNAi Global Initiative is a unique alliance of leading international biomedical researchers, and has been established to increase and accelerate the utility of **genome-wide siRNA libraries**. Genome-wide siRNA libraries have the potential to fundamentally change biological research by dramatically increasing scientists' ability to understand disease mechanisms and facilitating faster drug discovery and development. The RNAi Global Initiative will provide a forum for member institutions to share research protocols, establish experimental standards and develop mechanisms for exchanging and comparing screening data.

The RNAi Global Initiative was established and is being coordinated under the auspices of the **Dharmacon** Product line of **Thermo Fisher Scientific**, whose Research and Development scientists actively contribute to the Initiative.

Cell Function Dyes

Calcein AM, Calcein Blue AM and Calcein Violet AM

Calcein labeling dyes easily cross the cell membrane and selectively label live cells for analysis in flow cytometry or fluorescence microscopy. Calcein AM is non-toxic and maybe used for short-term cell tracing. Calcein Blue AM, a UV excited alternative to calcein AM, has excitation characteristics similar to DAPI, Hoechst, and AMCA dyes. Calcein Violet 450, is a violet laser (405 nm) equivalent to calcein AM. Co-staining with Annexin V or 7-AAD is recommended to allow the greatest resolution between live and dead/apoptotic cells.

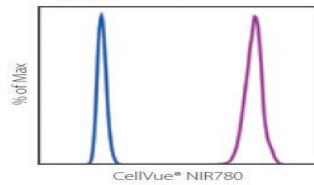

CellVue® Dyes

CellVue® lipophilic dyes can be used to label the cell membrane of live cells. Cell labeling is rapid and stable and can be combined with fluorescently labeled antibodies and other markers of cellular function for flow cytometric analysis and fluorescent microscopy.

1-hour / 1-wash phospho ELISA

Fast: Less than 1/3 the time of traditional ELISAs

Ease: 1/4 the effort with only 1 wash step eliminates hands-on time and return to bench trips

Flexible: Enabled detection of both total and phosphorylation protein targets up and down a pathway or across family members

Sensitive: meeting or exceeding industry standards with only 2,000 - 3,000 cells needed

Ubiquitously Read: colorimetric detection utilizing standard colorimetric plate readers found in most labs

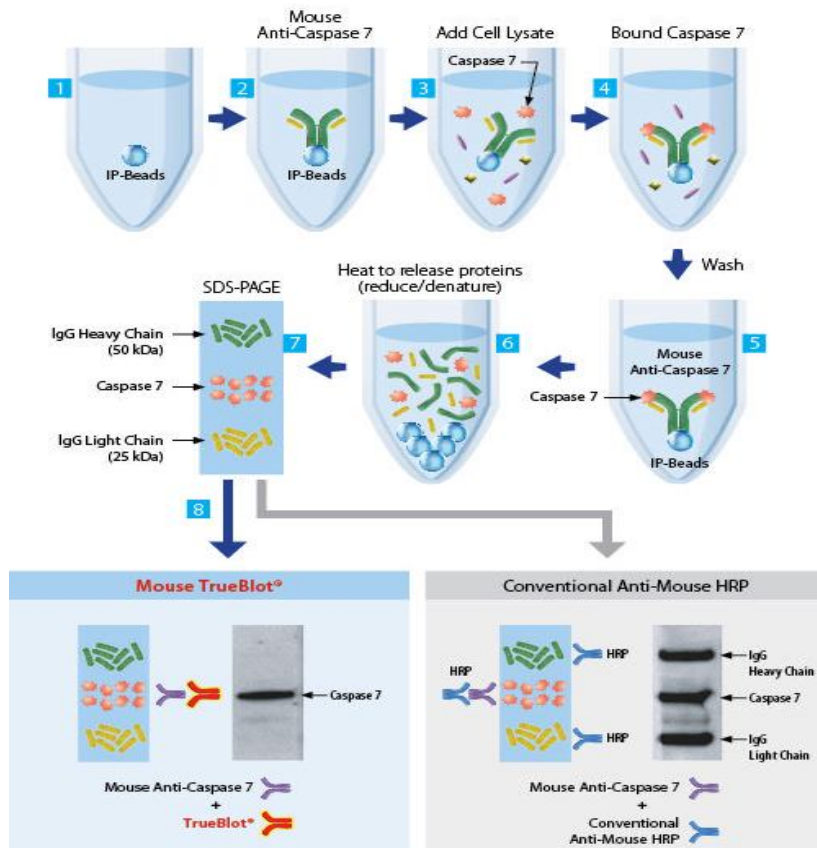

TrueBlot® Immunoblotting Technology

Free your IP/WB of Denatured Light & Heavy Chains

BIOGENE INDIA

208, IInd Floor, Magnum House-1,
KaramPura Commercial Complex, New Delhi-110 015.

TrueBlot® western blot detection system eliminates the appearance of non-specific, reduced immunoglobulin (Ig) bands in SDS-PAGE following immunoprecipitation. TrueBlot® binds only native Ig, giving you publication quality data, without additional heavy or light chain Ig bands which may mask your protein of interest.

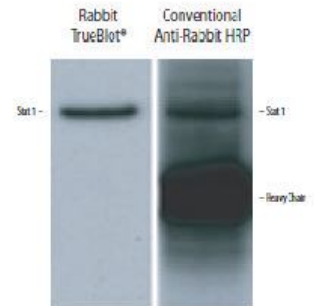

It is easy to use TrueBlot® in your current western blot procedures. Simply substitute your regular horseradish peroxidase- (HRP) conjugated secondary reagent with the Mouse, Rabbit, Goat or Sheep TrueBlot® HRP Ig. TrueBlot® works by preferentially detecting only native disulfide forms of mouse, rabbit, goat, or sheep Ig—effectively eliminating detection of reduced heavy and light Ig chains.

TrueBlot® Features:

- *Ease of use – Horseradish Peroxidase (HRP)-conjugated TrueBlot® anti-Ig simply replaces your regular HRP conjugated secondary antibody.*
- *Accurate target detection - Preferential detection of native Ig ensures you are only analyzing your target protein.*
- *Publication-quality data – Clean blots without irrelevant bands from heavy and light Ig contamination.*

Rabbit TrueBlot®

Rabbit TrueBlot: Stat1 was immunoprecipitated from Jurkat cell lysate using rabbit anti-human Stat1. Immunoprecipitate was detected by either Rabbit IgG TrueBlot® (left blot) or a conventional HRP (right blot) anti-rabbit IgG second step reagent.

Data of cDNA synthesis from RNA of complexed structure

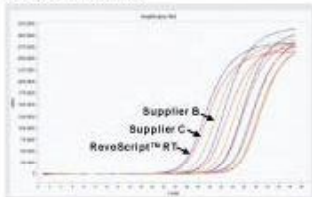

18S ribosomal RNA is a specific RNA which has highly complex secondary structure and the reverse transcription with the template is very difficult. RevoScript™ RT has thermostability at over 50 °C so that the reverse transcription can be easily implemented even in the case of complexed structured RNA.

Total RNA was purified from human cells (SRU-1) using *easy-spin™* Total RNA Extraction Kit (Cat. No. 17221). The extracted RNA were serially diluted (200ng to 200pg (10 fold dilution)) then first strand cDNA was synthesized using RevoScript™ RT PreMix Kit under different condition of incubation temperature. After cDNA synthesis, the 1.6kb of DNA fragment was amplified using *Maxima™* PCR PreMix Kit (+StarTaq). Lane 1: 200ng RNA template, lane 2: 20ng RNA template, lane 3: 2ng RNA template, lane 4: 0.2ng RNA template, and lane M: *Sizer™* - 1000 DNA Marker.

Efficiency comparison Data of Real time PCR

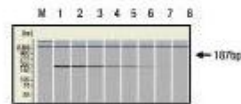

The cDNA synthesized with RevoScript™ RT PreMix Kit shows more superior sensitivity and wide linear dynamic range than other competitor's. Therefore, the kit is ideal for real-time PCR analysis.

After cDNA synthesis, the *House P* gene was amplified with specific primers and probe using *ABI 7500* DNA analyzer.

High sensitivity of cDNA synthesis

Human total RNA was serially diluted for reverse transcription reaction and the sensitivity of cDNA synthesis was tested. The test result shows that target gene was amplified up to 0.3pg of total RNA.

The first strand of cDNA was synthesized from serially diluted RNA using RevoScript™ RT PreMix Kit. 187 bp of DNA fragments were amplified using *Maxima™* PCR PreMix Kit (+StarTaq) and then applied automatic capillary DNA Analyzer. Lane M: Molecular weight marker, lane 1: 1 ng RNA template, lane 2: 0.2 ng RNA template, lane 3: 40 pg RNA template, lane 4: 8 pg RNA template, lane 5: 1.6 pg RNA template, lane 6: 320 pg RNA template, lane 7: 64 pg RNA template, and lane 8: Non template control.

Efficiency comparison Data

The various size of target-gene was amplified after cDNA synthesis to estimate the efficiency of reverse transcription. As following test result below, the amplification results of complex RNA (Lane 3) and long length RNA are much superior to competitor's result in terms of efficiency.

In order to compare cDNA elongation, the various size of DNA fragments were amplified using *Maxima™* PCR PreMix Kit (+StarMAXII) from cDNA synthesized with RevoScript™ RT PreMix Kit and competitor's.

Panel A: RevoScript™ RT PreMix Kit, panel B: Supplier A Product, panel C: Supplier B Product. Lane 1: 340 bp target gene, lane 2: 1 kb target gene, lane 3: 3.9 kb target gene, lane 4: 2.7 kb target gene, lane 5: 4.5kb target gene, lane 6: 9kb target gene, and lane M: *Sizer™* - 100 DNA Marker.

PLUG® TA-CLONING VECTOR

pLUG® TA-cloning vectors are designed for the convenient and direct PCR cloning and serving a credible blue/white colony selection. The credible blue/white colony selection could be realized by iNtRON's proprietary DCS™ technology. DCS™ technology excludes the possibility of selection of colonies having a parental plasmid used for the preparation of TA-cloning vector or a re-circulated plasmid after loss of T-overhang of TA-cloning vector.
